Since the early 1970s, experts have recognized that petroleum pollutants were being discharged in marine waters worldwide, from oil spills, vessel operations, and land-based sources. Public attention to oil spills has forced improvements. Still, a considerable amount of oil is

discharged yearly into sensitive coastal environments. Oil in the Sea provides the best available estimate of oil pollutant discharge into marine waters, including an evaluation of the methods for assessing petroleum load and a discussion about the concerns these loads represent.

Featuring close-up looks at the Exxon Valdez spill and other notable events, the book identifies important research questions and makes recommendations for better analysis of—and more effective measures against—pollutant discharge.

The book discusses: Input—where the discharges come from, including the role

of two-stroke engines used on recreational craft. Behavior or fate—how oil is affected by processes such as evaporation as it moves through the marine environment. Effects—what we know about the effects of petroleum hydrocarbons on marine organisms and ecosystems. Providing a needed update on a problem of international importance, this book will be of interest to energy policy makers, industry officials and managers, engineers and researchers, and advocates for the marine environment. American military aviation reached a low point after World War I, lagging behind its European counterparts and facing a

peacetime battle for survival. To raise the public profile of aviation, military leaders encouraged their pilots to enter air shows and vie for speed, endurance, and altitude records. As a result, U.S. Army airmen daringly accomplished the first flight around the world in 1924, three years before Charles Lindbergh's famous solo flight. In *Around the World in 175 Days*, Carroll V. Glines recounts this adventure from the golden age of aviation. After two years of planning, four Douglas World Cruisers, each carrying a pilot and a mechanic, took off from Seattle in April 1924, flying west to circle the globe; one additional plane was held in reserve. Four

of the men and two of the planes completed the flight in September 1924 and, miraculously, all eight men survived, even though one plane had crashed in the Alaskan mountains and another had ditched in the Atlantic. The airmen had triumphed over the weather extremes of Arctic Alaska and the desert Middle East, numerous primitive landing sites in rough terrain, and maintenance and supply problems that persisted despite the coordinated efforts of land- and sea-based support personnel from the Army Air Service, U.S. Navy, and U.S. Coast Guard. Glines captures the drama of the journey, from the careful behind-the-scenes

planning through the airmen's harrowing in-flight experiences to the mission's culmination in triumph. The success charted the future of the Army Air Service's worldwide aircraft deployment and paved the way for long-distance commercial air travel. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. Culled from "Sail" magazine's "Things That Work" column, these practical and ingenious boat improvements

can make sailing easier, safer, and more fun. 130 illustrations. The Regional Workshop on Safety at Sea in Artisanal and Small-scale Fisheries in the South West Indian Ocean was held in Moroni, Union of the Comoros, from 12 to 14 December 2006. Forty-one experts from the South West Indian Ocean (SWIO) region including an expert from Sweden and representatives of FAO participated. The workshop was organized and implemented by the Fishing Technology Service of the FAO Fisheries and Aquaculture Department, in close collaboration with the FAO Subregional Office for Southern Africa. During the

workshop, the results of the Study on safety at sea in artisanal and smallscale fisheries in the South West Indian Ocean, conducted in May 2006, were presented. In addition, seven experts from SWIOFC member States made presentations and took up matters affecting safety at sea in their countries. Experts from Grenada, Sweden and FAO made presentations on global and regional aspects of safety at sea that enriched the information provided to the delegates. The information presented was debated in four working groups on different themes covering fishing operations, data collection, legal framework and

technology. Advances in Marine Biology Another such wave could easily be the end of us. I had to do something, fix something, save the boat, save myself. But what? Gary Paulsen takes readers along on his maiden voyage, proving that ignorance can be bliss. Also really stupid and incredibly dangerous. He tells of boats that have owned him—good, bad, and beloved—and how they got him through terrifying storms that he survived by sheer luck. His spare prose conjures up shark surprises and killer waves as well as moonlight on the sea, and makes readers feel what it's like to sail under the stars or to lie at anchor in a tropical

lagoon where dolphins leap, bathed in silver. Falling in love with the ocean set Gary Paulsen on a lifelong learning curve and readers will understand why his passion has lasted to this day.
