The recent rash of corporate scandals--and the ensuing financial ruin of companies and their stockholders -- proves that even the bluest of blue chip businesses cannot bank on the blind faith of consumers and investors. More than ever, corporations must rebuild, restore, and strengthen bonds of trust. Al Golin has helped create trust strategies for global business leaders including The Walt Disney Company, Hewlett-Packard, McDonald's, Toyota, Owens-Corning, and many others. Trust or Consequences shows what makes such strategies work, and reveals the eye-opening results of a survey of over 700 business professionals. This essential book reveals how to: * create an effective trust strategy * determine the impact of trust issues on stakeholders * assess trust-building performance and calculate the difficulty of restoring trust * create a "trust bank" for saving deposits of good will to draw on as needed Trust or Consequences offers tools for identifying trust opportunities, as well as numerous inside accounts of trust-building successes and failures by high-profile organizations and leaders. Filled with provocative ideas about why many companies overlook trust issues, Trust or Consequences brings the subject to center stage -- where it must remain if companies are to regain stakeholder loyalty and competitive advantage. Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. Walter Walpole overcame adversity to go on to the founding of a worldwide enterprise known for its service, innovative products, and manufacturing excellence: Walbro Corporation. At age ten Walpole was turned out of his home by his father and step-mother to be shuttled between his married sisters and brothers. At age fourteen he quit school and took a full time job in order to pay for his room and board. When he was twenty Principia College in St. Louis, Missouri took a chance on him and admitted him, even though he lacked a high school diploma. Walpoles Principia experience helped mold his values and introduced him to the beautiful woman he married four years later, Elizabeth Holly. By the time of his marriage Walpole had a good job with Borg Warner, working out of its Chicago offices. He applied himself and was awarded with steady promotion. In 1932 he was assigned to Borg Warners Marvel Schebler Carburetor division in Flint, Michigan as its Treasurer and Secretary. By 1949 with the death of Marvels president Walpole expected to promoted to the top position. He had been de facto manager since the former presidents death earlier in the year. To his great disappointment, Walpole was passed over. Instead, an officer from Borg Warners Chicago headquarters was given the position. Borg Warners decision was a catalyst that led Walpole to leave Borg Warner and form his own company in competition with his former employer. Walpole organized his new company in 1950 and named it Walbro Corporation. In forming the company he envisioned a service oriented company dedicated to supplying non-automotive engine manufacturers affordable carburetors designed and manufactured to exacting standards. Walpole saw a burgeoning market for small engine carburetors. America was rapidly becoming a nation of middle class homeowners with lawns to mow, gardens to till, and boats to operate. To execute his vision, Walpole new company needed to develop a carburetor and sell it to one of the few small engine manufacturers that then were in business: Briggs & Stratton, Reo, Clinton Engines, Lauson, Kohler, and Chrysler Outboard. Since Briggs manufactured all of its own carburetors it was not a realistic target. Instead, Walpole focused on Reo and Clinton. Walpole attracted a young carburetor engineer, Bill Eberline, away from Marvel and assigned to him the task of developing the new carburetor. Without the scientific equipment normally available to a carburetor engineer, Eberline designed a carburetor aimed at a Reo application. Eberline was ingenious and innovative. His LMG model carburetor worked well and could be sold for a very competitive price. The engineering department at Reo, located in Lansing, Michigan, approved the carburetor and assured Walpole and Eberline that Reos purchasing department would give Walbro an order for it. The purchasing department thought otherwise, however. It concluded that a purchase of production carburetors from Walbro was too risky. Its current source of carburetors worked well and, even though its price was substantially less, Walbro had no production facilities, no staff, no systems, no experience, and no working capital. Eberline remembered the meeting with Reos purchasing department as a nasty experience. They threw me out on my ear. The Reo rejection was the low point in Walpoles business career. But his wife, Elizabeth refused to allow him to despair. She pulled him through with love and encouragement. She comforted him, held him,

and spoke lovingly to him. She kept a quiet faith that a solution would unfold. As was their habit they sought inspiration from the Holy Scripture. Elizabeth was not surprised when a telephone call came from Clinton Engine Company. Walbro had some carburetors on test with Clinton and when it began experiencing problems with its production engines, its director of research and engineering inquired of Walbro whether it would provide carburetor engineering service. Drawing on the insights of artists, philosophers, anthropologists, and other unusual sources, this first look inside the successful Japanese company addresses not just the question of how do we make good, responsible products, but the very basic questions that nag at us as we try to figure out the moral center--the purpose--of our everyday work. This popular guide is just the thing for people who seem to spend more time arguing with their lawn mowers than they do using them. With Small Gas Engine Repair, do-it-yourselfers can fix any small gas-powered machine on the spot and save hundreds of dollars in technical fees. The book's also a great source of troubleshooting and preventive maintenance techniques. Enhanced illustrations and lots of new material make up this second edition, including coverage of new American engines, emissions testing procedures, carburetor rebuilding techniques, and new starter and ignition systems. Japanese engines are also highlighted for the first time. Finally! A restoration guide with the kind of detail needed for a first class job. Feathers in Reverse is the ideal gift for a loved one who is scared of poetry. It engages and immerses readers with the luring subtlety of a serpent. Themes treated include good and evil, heaven and earth, man and woman, birth and death, urbanism and rural life, wealth and poverty. As much as the poet highlights salient issues and conflicts in everyday life, he suggests answers to burning problems as well. A common thread runs through the over 300 poems feathered and featured in this collection. The notion of the feather is cross-cultural. It reminds us of the feather used as a pen in ancient Europe and the red feather that is stuck on the caps of African notables as a mark of distinction. Feathers in Reverse is a magic pudding to be sampled, shared and indulged.
