The Age of Immunology Feb 21 2020 In this fascinating and inventive work, A. David Napier argues that the central assumption of immunology—that we survive through the recognition and elimination of non-self—has become a defining concept of the modern age. Tracing this immunological understanding of self and other through an incredibly diverse array of venues, from medical research to legal and military strategies and the electronic revolution, Napier shows how this defensive way of looking at the world not only destroys diversity but also eliminates the possibility of truly engaging difference, thereby impoverishing our culture and foreclosing tremendous opportunities for personal growth. To illustrate these destructive consequences, Napier likens the current craze for embracing diversity and the use of politically correct speech to a cultural potluck to which we each bring different dishes, but at which no one can eat unless they abide by the same rules. Similarly, loaning money to developing nations serves as a tool both to make the peoples in those nations more like us and to maintain them in the nonthreatening status of distant dependents. To break free of the resulting downward spiral of homogenization and self-focus, Napier suggests that we instead adopt a new

defining concept based on embryology, in which development and self-growth take place through a process of incorporation and transformation. In this effort he suggests that we have much to learn from non-Western peoples, such as the Balinese, whose ritual practices require them to take on the considerable risk of injecting into their selves the potential dangers of otherness—and in so doing ultimately strengthen themselves as well as their society. The Age of Immunology, with its combination of philosophy, history, and cultural inquiry, will be seen as a manifesto for a new age and a new way of thinking about the world and our place in it.

Roses at Dawn in an Ice Age World Jan 02 2021 Mankind is the child of the Ice Age. Our more than 2-million-year history extends through the entire Pleistocene Ice Age Epoch. We were shaped by the need to be creative to survive, and still are. Now that our warm interglacial epoch is nearly over, we find ourselves challenged to be creative once again as the global agriculture and with it our food-supply will be radically diminished once we get back into the Ice Age World. Can we protect our agriculture in indoor facilities? That sounds like science fiction, right? It will take a hundred years to do it. But will we upgrade our human dimension to do it, especially in the way we relate to one-another as human beings? We are deeply divided to the very grassroots social level, and isolated. The needed Ice Age Renaissance requires a taller foundation. The novel explores the countless dimensions that are involved in breaking the ice in our social domain, at the level of sexual and marital division and isolation, towards becoming sublime as human beings. The great renaissance principles of universal love and of the advantage of the other are threaded through the story, putting a new light on sex and marriage relationships and expanding them into the universal dimension. This novel is Episode 2B of the science fantasy series, *The Lodging for the Rose*, by Rolf A. F. Witzsche. *A dissertation on the true age of the World, in which is*

determined the chronology of the period from the Creation to the Christian era Aug 29 2020

The Stone Age Jul 20 2022 Discusses the long period of human history known as the Stone Age during which humans evolved into beings capable of inventing and using increasingly sophisticated tools and creating complex social groupings.

Bedlam in the New World Oct 11 2021 A rebellious Indian proclaiming noble ancestry and entitlement, a military lieutenant foreshadowing the coming of revolution, a blasphemous Creole embroiderer in possession of a bundle of sketches brimming with pornography. All shared one thing in common. During the late eighteenth century, they were deemed to be mad and forcefully admitted to the Hospital de San Hipolito in Mexico City, the first hospital of the New World to specialize in the care and custody of the mentally disturbed. Christina Ramos reconstructs the history of this overlooked colonial hospital from its origins in 1567 to its transformation in the eighteenth century, when it began to admit a growing number of patients transferred from the Inquisition and secular criminal courts. Drawing on the poignant voices of patients, doctors, friars, and inquisitors, Ramos treats San Hipolito as both a microcosm and a colonial laboratory of the Hispanic Enlightenment—a site where traditional Catholicism and rationalist models of madness mingled in surprising ways. She shows how the emerging ideals of order, utility, rationalism, and the public good came to reshape the institutional and medical management of madness. While the history of psychiatry's beginnings has often been told as seated in Europe, Ramos proposes an alternative history of madness's medicalization that centers colonial Mexico and places religious figures, including inquisitors, at the pioneering forefront.

The Synthetic Age Apr 29 2023 Imagining a future in which humans fundamentally reshape the natural world using nanotechnology, synthetic biology, de-extinction, and climate engineering. We have all heard that there are no longer any

places left on Earth untouched by humans. The significance of this goes beyond statistics documenting melting glaciers and shrinking species counts. It signals a new geological epoch. In *The Synthetic Age*, Christopher Preston argues that what is most startling about this coming epoch is not only how much impact humans have had but, more important, how much deliberate shaping they will start to do. Emerging technologies promise to give us the power to take over some of Nature's most basic operations. It is not just that we are exiting the Holocene and entering the Anthropocene; it is that we are leaving behind the time in which planetary change is just the unintended consequence of unbridled industrialism. A world designed by engineers and technicians means the birth of the planet's first Synthetic Age. Preston describes a range of technologies that will reconfigure Earth's very metabolism: nanotechnologies that can restructure natural forms of matter; "molecular manufacturing" that offers unlimited repurposing; synthetic biology's potential to build, not just read, a genome; "biological mini-machines" that can outdesign evolution; the relocation and resurrection of species; and climate engineering attempts to manage solar radiation by synthesizing a volcanic haze, cool surface temperatures by increasing the brightness of clouds, and remove carbon from the atmosphere with artificial trees that capture carbon from the breeze. What does it mean when humans shift from being caretakers of the Earth to being shapers of it? And in whom should we trust to decide the contours of our synthetic future? These questions are too important to be left to the engineers.

Jan 22 2020

Age Of The Earth, The: A Physicist's Odyssey May 18 2022 This book spells out in detail how the age of the Earth has been determined over the centuries. First — the 'biblical' age: how was the date of Creation 4004 BC figured out? A date which is so important even today ... it is the basis of claims made by millions that the Earth is only about 6000 years old. Next — the response of geologists (and Darwin) for a very old Earth. Then, Kelvin's calculation of how long it would take for a hot Earth to cool down to its present state. And finally, today's answer ('billions'), based on the properties of radioactive materials. So, how old is Planet Earth?

The Age of Sustainability Sep 22 2022 With transitions to more sustainable ways of living already underway, this book examines how we understand the underlying dynamics of the transitions that are unfolding. Without this understanding, we enter the future in a state of informed bewilderment. Every day we are bombarded by reports about ecosystem breakdown, social conflict, economic stagnation and a crisis of identity. There is mounting evidence that deeper transitions are underway that suggest we may be entering another period of great transformation equal in significance to the agricultural revolution some 13,000 years ago or the Industrial Revolution 250 years ago. This book helps readers make sense of our global crisis and the dynamics of transition that could result in a shift from the industrial epoch that we live in now to a more sustainable and equitable age. The global renewable energy transition that is already underway holds the key to the wider just transition. However, the evolutionary potential of the present also manifests in the mushrooming of ecocultures, new urban visions, sustainability-oriented developmental states and new ways of learning and researching. Shedding light on the highly complex challenge of a sustainable and just transition, this book is essential reading for anyone concerned with establishing a more

meet.uninter.edu.py

sustainable and equitable world. Ultimately, this is a book about hope but without easy answers.

The Muslim World Sep 29 2020

The Origins of Money in the Iron Age Mediterranean World Dec 01 2020 This book shows how money emerged and spread in the eastern Mediterranean, centuries before the invention of coinage. While the invention of coinage in Ancient Lydia around 630 BCE is widely regarded as one of the defining innovations of the ancient world, money itself was never invented. It gained critical weight in the Iron Age (ca. 1200 - 600 BCE) as a social and economic tool, most dominantly in the form of precious metal bullion. This book is the first study to comprehensively engage with the early history of money in the Iron Age Mediterranean, tracing its development in the Levant and the Aegean. Building on a detailed study of precious metal hoards, Elon D. Heymans deploys a wide range of sources, both textual and material, to rethink money's role and origins in the history of the eastern Mediterranean.

The Age of Walls Sep 10 2021 Tim Marshall, the New York Times bestselling author of *Prisoners of Geography*, offers “a readable primer to many of the biggest problems facing the world” (Daily Express, UK) by examining the borders, walls, and boundaries that divide countries and their populations. The globe has always been a world of walls, from the Great Wall of China to Hadrian’s Wall to the Berlin Wall. But a new age of isolationism and economic nationalism is upon us, visible in Trump’s obsession with building a wall on the Mexico border, in Britain’s Brexit vote, and in many other places as well. China has the great Firewall, holding back Western culture. Europe’s countries are walling themselves against immigrants, terrorism, and currency issues. South Africa has heavily gated communities, and massive walls or fences separate people in the Middle East, Korea, Sudan, India, and other places around the world. In fact, more than a third of the world’s nation-states have barriers along their borders.

meet.uninter.edu.py

Understanding what is behind these divisions is essential to understanding much of what's going on in the world today. Written in Tim Marshall's brisk, inimitable style, *The Age of Walls* is divided by geographic region. He provides an engaging context that is often missing from political discussion and draws on his real life experiences as a reporter from hotspots around the globe. He examines how walls, borders, and barriers have been shaping our political landscape for hundreds of years, and especially since 2001, and how they figure in the diplomatic relations and geo-political events of today. "Marshall is a skilled explainer of the world as it is, and geography buffs will be pleased by his latest" (Kirkus Reviews). "Accomplished, well researched, and pacy...*The Age of Walls* is for anyone who wants to look beyond the headlines and explore the context of some of the biggest challenges facing the world today, it is a fascinating and fast read" (City AM, UK).

The Age of Aging Oct 31 2020 The year 2008 marks the beginning of the baby boomer retirementavalanche just as the different demographics in advanced and mostdeveloping countries are becoming more pronounced. People areworrying again that developments in global population trends, foodsupply, natural resource availability and climate change raise thequestion as to whether Malthus was right after all. *The Age of Aging* explores a unique phenomenon for mankind and,therefore, one that takes us into uncharted territory. Low birthrates and rising life expectancy are leading to rapid aging and astagnation or fall in the number of people of working age inWestern societies. Japan is in pole position but will be joinedsoon by other Western countries, and some emerging marketsincluding China. The book examines the economic effects of aging,the main proposals for addressing the implications, and how agingsocieties will affect family and social structures, and the type ofenvironment in which the baby-boomers' children will grow up. The contrast between the expected old age bulge in Western nationsand the youth bulge in

developing countries has important implications for globalization, and for immigration in Western countries - two topics already characterized by rising discontent or opposition. But we have to find ways of making both globalization and immigration work for all, for fear that failure may lead us down much darker paths. Aging also brings new challenges for the world to address in two sensitive areas, the politicization of religion and the management of international security. Governments and global institutions will have to take greater responsibilities to ensure that public policy responses are appropriate and measured. The challenges arising within aging societies, and the demographic contrasts between Western and developing countries make for a fractious world - one that is in line with the much-debated 'decline of the West'. The book doesn't flinch from recognizing the ways in which this could become more visible, but also asserts that we can address demographic change effectively if governments and strengthened international institutions are permitted a larger role in managing change.

Remaking the World - the Age of Global Enlightenment Oct 23 2022 "Remaking the World - the Age of Global Enlightenment" proposes pathways toward a more humane, peaceful, and secure world, largely by harnessing the potential of Artificial Intelligence (AI), blockchain, and other Digital Age technologies. A key proposal is the adoption of an AI International Accord that would bind nations to constructive uses of AI and prohibit destructive uses. The book proposes a Social Contract for the AI Age as the theoretical and ethical foundation of the Accord. The book also proposes the AI World Society (AIWS) as a vehicle through which individuals and civic organizations can help foster an Age of Global Enlightenment.

The Human Age: The World Shaped By Us Mar 28 2023 Winner of the National Outdoor Book Award and the PEN New England Henry David Thoreau Prize. A dazzling, inspiring tour through the ways that humans are working with nature to try to

meet.uninter.edu.py

save the planet. With her celebrated blend of scientific insight, clarity, and curiosity, Diane Ackerman explores our human capacity both for destruction and for invention as we shape the future of the planet Earth. Ackerman takes us to the mind-expanding frontiers of science, exploring the fact that the "natural" and the "human" now inescapably depend on one another, drawing from "fields as diverse as evolutionary robotics...nanotechnology, 3-D printing and biomimicry" (New York Times Book Review), with probing intelligence, a clear eye, and an ever-hopeful heart.

Religion and Modern World, the Age of Need Dec 25 2022

The Age of Colonialism Dec 21 2019 From the late 1400s to the mid-1900s, the world's great powers engaged in a virtual feeding frenzy of conquest, colonization, and often ruthless exploitation of less developed regions and populations. Only in 1970 did the United Nations outlaw colonialism. This volume documents the rise and fall of the great colonial empires in North and South America, Africa, the Far East, and the Pacific region, and explores how many of the political and cultural problems the world faces today were created by the imperial and colonial practices of the past.

Age records May 06 2021

The War of the World Apr 17 2022 The world at the beginning of the 20th century seemed for most of its inhabitants stable and relatively benign. Globalizing, booming economies married to technological breakthroughs seemed to promise a better world for most people. Instead, the 20th century proved to be overwhelmingly the most violent, frightening and brutalized in history with fanatical, often genocidal warfare engulfing most societies between the outbreak of the First World War and the end of the Cold War. What went wrong? How did we do this to ourselves? The War of the World comes up with compelling, fascinating answers. It is Niall Ferguson's masterpiece.

The Third World in an Age of Crisis Dec 13 2021

Science and the Quest for Reality Aug 09 2021 Science and the Quest for Reality is an interdisciplinary anthology that situates contemporary science within its complex philosophical, historical, and sociological contexts. The anthology is divided between, firstly, characterizing science as an intellectual activity and, secondly, defining its social role. The philosophical and historical vicissitudes of science's truth claims has raised profound questions concerning the role of science in society beyond its technological innovations. The deeper philosophical issues thus complement the critical inquiry concerning the broader social and

ethical influence of contemporary science. In the tradition of the 'Main Trends of the Modern World' series, this volume includes both classical and contemporary works on the subject.

Don't Panic Nov 12 2021 Based on a series of short stories by the same author. This novelized version contains extended content.

The Darkening Age Jun 26 2020 A New York Times Notable Book, winner of the Jerwood Award from the Royal Society of Literature, a New York Times Book Review Editors' Choice, and named a Book of the Year by the Telegraph, Spectator, Observer, and BBC History Magazine, this bold new history of the rise of Christianity shows how its radical followers helped to annihilate Greek and Roman civilizations. The Darkening Age is the largely unknown story of how a militant religion deliberately attacked and suppressed the teachings of the Classical world, ushering in centuries of unquestioning adherence to "one true faith." Despite the long-held notion that the early Christians were meek and mild, going to their martyrs' deaths singing hymns of love and praise, the truth, as Catherine Nixey reveals, is very different. Far from being meek and mild, they were violent, ruthless, and fundamentally intolerant. Unlike the polytheistic world, in which the addition of one new religion made no fundamental difference to the old ones, this new ideology stated not only that it was the way, the truth, and the light but that, by extension, every single other way was wrong and had to be destroyed. From the first century to the sixth, those who didn't fall into step with its beliefs were pursued in every possible way: social, legal, financial, and physical. Their altars were upturned and their temples demolished, their statues hacked to pieces, and their priests killed. It was an annihilation. Authoritative, vividly written, and utterly compelling, this is a remarkable debut from a brilliant young historian.

The World Come of Age Jan 26 2023 On November 16, 2017, Pope Francis tweeted, "Poverty is not an accident. It has causes that must be recognized and removed for the good of so many of our

brothers and sisters." With this statement and others like it, the first Latin American pope was associated, in the minds of many, with a stream of theology that swept the Western hemisphere in the 1960s and 70s, the movement known as liberation theology. Born of chaotic cultural crises in Latin America and the United States, liberation theology was a trans-American intellectual movement that sought to speak for those parts of society marginalized by modern politics and religion by virtue of race, class, or sex. Led by such revolutionaries as the Peruvian Catholic priest Gustavo Gutiérrez, the African American theologian James Cone, or the feminists Mary Daly and Rosemary Radford Ruether, the liberation theology movement sought to bridge the gulf between the religious values of justice and equality and political pragmatism. It combined theology with strands of radical politics, social theory, and the history and experience of subordinated groups to challenge the ideas that underwrite the hierarchical structures of an unjust society. Praised by some as a radical return to early Christian ethics and decried by others as a Marxist takeover, liberation theology has a wide-ranging, cross-sectional history that has previously gone undocumented. In *The World Come of Age*, Lilian Calles Barger offers for the first time a systematic retelling of the history of liberation theology, demonstrating how a group of theologians set the stage for a torrent of new religious activism that challenged the religious and political status quo.

Population Age Structure and the Budget Deficit Feb 03 2021

"Chen focuses on the effects of age structure changes on the size of budget deficits of national governments. More specifically, he determines whether differences in age structure can account for the observed differences in budget deficits across countries as well as across time. By way of an extension of the untested theory of negative bequest motives advocated by Cukierman and Meltzer (1989), the author argues that the commonly accepted notion that population aging tends to increase the budget deficits of

economies is theoretically consistent. However, preliminary results from country and time fixed-effects panel regressions, estimated from 1975 to 1992 over 55 industrial and developing countries, indicate statistical evidence for this postulation is present only in the developing countries but not in the industrial countries. This paper--a product of the Knowledge for Development Program, World Bank Institute--is part of a larger effort in the institute to study the economic and social effects of population aging"--World Bank web site.

World History Nov 24 2022 An essential gift for every history buff, this boldly illustrated book maps out the events that have shaped our world - from the dawn of human civilization to the present day. A comprehensive and accessible guide to the history of human civilisation, World History profiles everything from the emergence of Homo Sapiens to the Greek and Roman empires, through Chinese dynasties, the rise of the Vikings, and the Renaissance, to the Industrial Revolution and World War I and II. Offering a concise and insightful overview of key historical milestones that have occurred over the course of the last century, the book also covers more recent events such as the rise of ISIS, the Arab Spring, and Brexit and populism in the Western world.

A World Lit Only by Fire Jun 07 2021 A "lively and engaging" history of the Middle Ages (Dallas Morning News) from the acclaimed historian William Manchester, author of *The Last Lion*. From tales of chivalrous knights to the barbarity of trial by ordeal, no era has been a greater source of awe, horror, and wonder than the Middle Ages. In handsomely crafted prose, and with the grace and authority of his extraordinary gift for narrative history, William Manchester leads us from a civilization tottering on the brink of collapse to the grandeur of its rebirth: the dense explosion of energy that spawned some of history's greatest poets, philosophers, painters, adventurers, and reformers, as well as some of its most spectacular villains. "Manchester provides easy access to a fascinating age when our modern mentality was

just being born." --Chicago Tribune

Intergenerational Support and Old Age in Africa Feb 15

2022 In most societies of the world, including in Africa, responsibility for the material support of older people unable to sustain themselves through work or investments originally resided with their younger generational family members--especially their adult children. Aboderin explores this topic specifically for Africa. In the wake of social or economic change, societies experience shifts in the degree to which families support their elders. Questions about the proper balance of family and state responsibility, however, persist, especially in light of socio-demographic trends and constraints in public expenditure. In most of sub-Saharan Africa, in contrast to other world regions, economic security policies for older people have not yet been formulated, despite declines in material family support along with rising poverty to which a growing elderly population is exposed. In part, this betrays the crucial lack of understanding about how and why these shifts in support have occurred in African societies--and, thus, a profound uncertainty about what balance of individual, family, and state responsibilities will be culturally appropriate and effective in ensuring economic security for older Africans both now and in the future. Aboderin aims to address these gaps in understanding. She provides an empirical and theoretical analysis of the micro and macro level processes that have underpinned recent declines in old age family support in African societies and likely parameters of future familial support. She also addresses more fundamental theoretical questions about how we should think about the relationships between intergenerational support, norms and values, and societal change. Intergenerational Support in Africa will be of interest to students of African studies, economic policy and theory concerning eldercare, sociology, and social welfare development.

History Year by Year Mar 16 2022 Journey through a mammoth timeline, richly illustrated with over 1,500 photos, maps, and

meet.uninter.edu.py

illustrations. Written in association with the esteemed Smithsonian Institution. A beautiful visual reference book with key events of world history, written in an elementary language for budding historians. Take chronological steps through human history, starting long before we even began to write. Learn about significant global events like the rise of different societies, revolutions, invasions, and new discoveries. Meet the most memorable people from the history books. The charismatic leaders, brutal dictators, influential thinkers, and innovative scientists from all around the globe. Written with kids ages 9 to 12 in mind, this book uses unpretentious language and gives straightforward fun facts. The "Child Of The Time" feature encourages young people to imagine themselves in the past and lets them know that children had a place in history. Older readers will love this engaging educational book too! Dive in and discover the parts of the past you haven't yet discovered. The multitude of photos, maps, and graphics make reading about history simple and enjoyable. This visual reference guide provides the reader with an overview of the most fascinating events in history, with concise and bite-sized information. Follow the timeline from our most distant past, all the way through to recent events that you may still remember happening! The History Of The World, From The Stone Age To The Digital Age Go beyond American history and explore the world in this modern twist on an old-fashioned history book. It is easier to follow, organized along a timeline with photos of archaeological artifacts, old maps, and exciting pictures. You won't just read about world history. You'll see it too, right from your armchair. Take a step back in time! - 6.5 MYA - 3000 BCE Before History Began - 3000 BCE - 700 BCE Really Ancient History - 700 BCE - 500 CE Much More Civilization - 500 - 1450 The Marvelous Middle Ages - 1450 - 1750 Exploring and Reforming - 1750 - 1850 Time for Change - 1850 - 1945 Empires and World Wars - 1945 - Present Fast Forward
